## Virtual Tourist

Criteria	Meets Specifications
<b>Core Data</b>	
Does the app create a managed object context backed by a local SQLite store?	The app contains a correctly configured managed object context backed by a local SQLite store.
Does the app use a managed object model created in the Xcode model editor?	The app uses a managed object model created in the Xcode Model Editor. A <code>.xcdatamodeld</code> model file is present.
Does the object contain two entities: Pin and Photo?	The object model contains both Pin and Photo entities.
Does the object model contain a one-to-many relationship between the Pin and Photo entities, with an appropriate inverse?	The object model contains a one-to-many relationship between the Pin and Photo entities, with an appropriate inverse.
<b>Travel Locations Map View</b>	
Does the app contain a map view that allows users to drop pins with a touch and hold gesture?	The app contain a map view that allows users to drop pins with a touch and hold gesture.
Does the app transition to the Photo Album view when an existing pin is tapped?	When a pin is tapped, the app transitions to the photo album associated with the pin location.
When pins are dropped on the map, are they persisted as Pin instances in Core Data?	When pins are dropped on the map, the pins are persisted as Pin instances in Core Data and the context is saved.
<b>Photo Album View</b>	
When a photo album view is opened for a pin that does not yet have any photos, does it begin to download images from Flickr?	When a Photo Album View is opened for a pin that does not yet have any photos, it initiates a download from Flickr.
Is the code for downloading images from Flickr encapsulated into a class?	The code for downloading photos is in its own class, separate from the <code>PhotoAlbumViewController</code> .
Are images shown with placeholders in a collection view while they download, and displayed as soon as possible?	Images display as they are downloaded. They are shown with placeholders in a collection view while they download, and displayed as soon as possible.

Are Image files stored into the Documents directory, and are the paths to these files stored in Photo entities in Core Data, with a relationship to the pin?	Image data is stored in files in the Documents directory. Corresponding paths are stored in Photo instances in Core Data, with a relationship to the pin.
Once all images have been downloaded, can the user remove photos from the album by tapping the image in the collection view?	Once all images have been downloaded, the user can remove photos from the album by tapping the image in the collection view. Tapping the image removes it from the photo album, the booth in the collection view, and Core Data.
When Photos are removed from an album, is the underlying file in the Documents directory deleted?	When a photo is removed from an album, or when an entire album is deleted, the <code>PhotoAlbumViewController</code> explicitly deletes the underlying file(s) in the Documents directory.
Does the Photo Album view have a button that allows the user to replace the images in a photo album with a new set of images downloaded from Flickr?	The Photo Album view has a button that initiates the download of a new album, replacing the images in the photo album with a new set from Flickr.
If the Photo Album view is opened for a pin that already has photos, are they immediately displayed?	If the Photo Album view is opened for a pin that previously had photos assigned, they are immediately displayed. No new download is needed.

### Suggestions to Make Your Project Stand Out!

- Add more entities to your Core Data model.
- Implement a feature where the user can drag the pin they have just dropped on the map, but only until they lift their finger. Note, this is different to the `.draggable` property of map pins!
- When the user drops the pin on the map, start downloading the images immediately without waiting for the user to navigate to the collection view.
